

TextCoin (\$TXT) Utility Token

WHITE PAPER

CAPTURING THE VALUE OF PERSONAL ENGAGEMENT THROUGH TOKENIZATION ON THE XRPL

Informational Purposes Only

This whitepaper is provided solely for informational purposes and does not constitute an offer to sell, a solicitation to buy, or a recommendation for investment. The information contained herein is subject to change without notice and does not bind Xurge Digital Lab LLC, TextRP, or its affiliated entities in any way. Prospective participants are advised to seek independent professional advice before making any financial, legal, or investment decisions.

MESSAGING UTILITY

A robust and adaptable messaging utility designed for seamless communication in a decentralized ecosystem. TextRP facilitates secure and real-time messaging across various platforms, ensuring interoperability and scalability for enterprise and community use. The system supports rich features such as room-based communication, end-to-end encryption, and flexible API integration, making it a versatile solution for dynamic messaging needs in modern digital environments.

XRPL

A decentralized blockchain-based platform optimized for fast and cost-effective transactions, particularly in payments and tokenization. It enables trustless, peer-to-peer transfer of value with features like a built-in decentralized exchange, native support for issuing tokens, and functionalities such as escrow and payment channels for complex financial operations. It is known for its energy efficiency and high transaction throughput, making it suitable for a variety of use cases, including cross-border payments and DeFi applications.

Section 1: Introduction

TextRP is a communication platform designed to revolutionize the way users engage in messaging and digital interactions by integrating blockchain technology. Built on the XRP Ledger (XRPL), TextRP offers users secure, fast, and scalable messaging services that can operate across multiple networks and platforms.

TextRP bridges traditional messaging and decentralized technology, providing users with unique opportunities to engage with non-fungible tokens (NFTs), decentralized finance (DeFi), and other blockchain-based innovations. The platform fosters a digital ecosystem that rewards users for meaningful engagement while providing them access to an efficient and privacy-focused communication tool.

At the heart of this ecosystem is the \$TXT token, which powers the reward system and enables users to unlock features, purchase services, and participate in the broader decentralized economy.

Problem Statement

Traditional messaging platforms do not provide users with tangible rewards for their engagement and offer limited utility beyond basic communication. These platforms are often centralized, leading to concerns around **data privacy, lack of transparency, and high operational costs**. Additionally, they do not offer integration with decentralized technologies or economies, limiting user opportunities to engage with blockchain-based assets and financial tools.

TextRP addresses these issues by:

- Enabling wallet-to-wallet communication that is end-to-end encrypted.
- Consolidating messages from many other platforms into one inbox for added convenience.
- Rewarding users for their activity with \$TXT tokens, creating a sustainable incentive structure that promotes engagement and participation.
- Integrating decentralized technologies to ensure user privacy, data security, and ownership of communications.
- Offering access to DeFi services and NFT marketplaces, enabling users to interact with digital assets and engage in financial activities directly within the platform.

mCredits: Account-Based Interaction Units

TextRP operates with mCredits, which are the internal units that track user interactions within the platform. Unlike \$TXT, mCredits are non-currency interaction units that regulate activity on the platform by managing the consumption of messaging and engagement services.

How mCredits Work:

- Users purchase mCredits using \$TXT, \$XRP, or fiat currency to engage with the platform's messaging and interaction features.
- Every message sent or some interactions with widgets consumes a certain amount of mCredits, making these units essential for platform functionality.
- Users receive bonus mCredits when purchased with \$TXT tokens, encouraging them to utilize the platform's native token for activity.

mCredits act as the backbone of platform engagement, ensuring that users participate in a fair and accountable manner while directly linking user activity to the platform's economy.

The Role of \$TXT

The \$TXT token is central to the TextRP ecosystem, acting as both a reward currency and a utility token. The token drives engagement, encourages user participation, and powers the platform's economic infrastructure.

Reward Mechanism

- \$TXT tokens are distributed to users based on their engagement within the platform. The more a user interacts with the platform—through messaging, widget usage, or trading NFTs—the more \$TXT they earn.

Utility Token

- Users can purchase mCredits using \$TXT tokens, which gives them more value for their purchase compared to other currencies like XRP or fiat.
- As the platform grows, \$TXT tokens will integrate with other decentralized services, allowing holders to access DeFi tools and participate in governance mechanisms within the TextRP ecosystem.

Section 2: \$TXT Token Overview

Purpose of the Textcoin Token

The \$TXT token is the core utility and reward currency within the TextRP platform. Its primary function is to drive user engagement and activity, creating a seamless and incentivized ecosystem where users are rewarded for participation and interaction. The key purposes of the \$TXT token include:

Engagement and Activity Rewards

- Earn \$TXT tokens as rewards for meaningful activities on the platform, including sending messages, engaging with widgets, participating in cross-platform messaging, and using other platform features.

Platform Utility

- Buy mCredits with \$TXT: receive more mCredits compared to paying with other currencies
- Payments: Use \$TXT for gifting, tipping, or settling payments with our in-chat payments feature

Tangibles

- Merchandise: Spend \$TXT on merchandise from TextRP and partner stores
- Custom Development: Use \$TXT to procure custom communications solutions from the creators of TextRP.

DeFi and Governance Participation

- AMM liquidity pools: Deposit \$TXT to earn a portion of the trading fees.
- Yield Rewards: Earn \$TXT from the Reward Pool for early AMM depositors.
- Governance: Community-based decisions on future AMM pairings.

Token Supply and Allocation

The total supply of \$TXT tokens is capped at **100 billion**, with a careful allocation strategy designed to support the growth and sustainability of the TextRP platform. The token supply is distributed across several key areas, each designed to foster long-term engagement, liquidity, and development.

Section 3: Chat Reward Distribution

Real-time Rewards

All \$TXT minted from engagement is paid out immediately:

- In the TextRP chat client: Every 24 hours at 12:00 AM GMT (batch payout of accumulated rewards from messaging activity).
- In TextRP Live!: At the end of each live stream session (instant XRPL transfer to creator + viewers who stayed till the end).

Engagement Value

Platform actions consume mCredits and instantly mints \$TXT at the current live rate (updated every 60 seconds)

- In-App Messages sent
- Live Stream Emoji reactions
- Bridged Messaging: message sent to external platforms.
- Widget Interactions: select platform widgets or partner features.

Every mCredit spent on an action mints real \$TXT directly from the depleting reward pool, creating immediate, ownable value from personal attention.

Rolling 24-Hour Reward Distribution

The total reward pool releases the tiered percentage (see page 9) of its current balance continuously over a rolling 24-hour window. This creates a smooth, always-on flow of new \$TXT while preserving the growth-based scarcity structure.

The live rate is calculated as:

$$\text{Rate}(t) = \frac{\text{Daily Available \$TXT}(t)}{M_{\text{global_24h}}(t)}$$

where

$\text{Daily Available \$TXT}(t) = \text{Current Pool Balance}(t) \times \text{Tier Slice}(u_t)$

$M_{\text{global_24h}}(t) = \text{total mCredits spent platform-wide in the last 24 hours (rolling window)}$

and $\text{Tier Slice}(u_t)$ is the daily release percentage based on current active users u_t as explained and displayed on page 9.

This model delivers continuous, real-time tokenization of engagement across Live and messaging, providing instant feedback in Live and reliable daily rewards in chat, with perfect alignment to the core promise: *“Capturing the value of personal engagement through tokenization on the XRPL.”*

Evolving with Platform Growth

As the TextRP ecosystem evolves, new activities, tools, and features will be introduced. TextRP will periodically review and adjust the reward distribution model to reflect the platform’s growth and ensure that engagement remains meaningful.

Section 4: Launch Pack NFTs

Launch Pack NFTs (LPs) are the cornerstone of TextRP's tokenized ecosystem, enabling users to unlock and amplify their experience within the application. These limited-edition, non-fungible tokens on the XRPL provide multifaceted utility, including access to app features, community benefits, and reward programs.

Utility and Benefits

- **Access to Features:** LPs serve as access tokens for the TextRP platform, granting holders advanced functionality and exclusive app benefits.
- **Reward Multiplier:** LP holders multiply their chat rewards. Hold 1 LP for 50% more weight points, hold 2 LPs for 2x point, 3 LPs for 4x, etc. There is no limit to the number of LPs a participant may hold.
- **Airdrops:** LP holders receive Feature Pack NFTs (FPs) with each new release, ensuring continued value and ecosystem participation.
- **Community Engagement:** LP ownership unlocks tiered roles within the TextRP community, offering perks like early access to updates, exclusive giveaways, and alpha-testing privileges.

Limited Supply

With **only 5,000** LPs available, scarcity and exclusivity drive value. As unsold LPs are destroyed when the Chat Rewards engine goes online, the remaining LPs become even more integral to the ecosystem's operation. This strategic design ensures that early adopters benefit from their active participation.

Ecosystem Role

Launch Pack NFTs bridge utility and community engagement, forming a foundational layer that drives TextRP's adoption and sustainability. By combining functional benefits with exclusive rewards, LPs foster a committed user base and support the project's long-term vision.

The purchase of Launch Packs is not required for use of TextRP or participation in the Chat Rewards program.

Please visit lpguide.textrp.io for more details about Launch Pack NFTs.

Section 5: Long-Term Sustainability

Ensuring Token Scarcity and Value Preservation

The long-term sustainability of the \$TXT token is a core component of TextRP's economic model. To maintain the value and scarcity of the token over time, TextRP employs a **token burn** on unallocated chat reward tokens, and a **tiered reward reduction system** that aligns token distribution with user growth and engagement. This ensures that as the platform scales, the rate of token issuance gradually decreases, preserving the token's scarcity and long-term value.

Tiered Reward Distribution Based on User Growth

To prevent token inflation and support scarcity, and control the rate of distribution as the platform grows, TextRP employs a tiered reward distribution mechanism. This approach adjusts the percentage $\text{Tier Slice}(u_t)$ of the remaining reward pool that is distributed to users each week based on the total number of active users.

Tiered Reward Distribution Model

- Below 100,000 users: Distribute 0.01% of the remaining reward pool per day.
- At 100,000 users: Distribute 0.0075% of the remaining reward pool per day.
- At 250,000 users: Distribute 0.005% of the remaining reward pool per day.
- At 500,000 users: Distribute 0.0025% of the remaining reward pool per day.
- At 1 million users: Distribute 0.001% of the remaining reward pool per day.

This tiered structure ensures that:

- Early adopters are rewarded more generously during the platform's early stages when the user base is smaller.
- As the platform grows, the reward distribution percentage decreases, making \$TXT tokens more scarce and preserving their long-term value.
- The reward pool is distributed more slowly over time, ensuring that rewards can be sustained over many years.

Longevity of the \$TXT Reward Pool

The total supply of \$TXT tokens is capped at **100 billion**, with 35% of this supply (35 billion \$TXT tokens) allocated to reward user engagement. The tiered reward reduction model ensures that these tokens are distributed gradually over time, extending the life of the reward pool as user growth accelerates.

Using a **decaying distribution model**, where the percentage of the remaining pool is decreased as the user base reaches higher thresholds, ensuring that rewards last for a more extended period.

- Under the initial 0.01% reward distribution rate, the reward pool would deplete faster in the early stages when the user base is smaller, offering substantial rewards to early adopters.
- As the platform grows and the distribution rate is reduced to 0.0075%, 0.005%, and lower, the rate of depletion slows, ensuring that the reward pool can last for several decades while continuing to provide incentives to active users.

By dynamically adjusting the distribution rate in line with user growth, TextRP ensures that the \$TXT reward pool remains available for the long-term, providing incentives to new users while preserving value for early participants.

Proportional Reward System and Market Forces

The proportional reward distribution model aligns user rewards with platform engagement, ensuring that tokens are allocated fairly and based on contribution to the ecosystem. This model also mitigates the risk of reward inflation, as token distribution is relative to overall platform activity and the remaining reward pool.

Additionally, the tiered reward structure supports a healthy token economy by reducing token issuance as market demand for \$TXT increases. As fewer tokens are distributed, the market supply tightens, which can support token price stability or appreciation, depending on demand.

The combination of a proportional reward system and a tiered distribution model allows for:

- Active users to be rewarded fairly and consistently based on their level of engagement.
- Token scarcity to be maintained, ensuring that the total supply of \$TXT is managed responsibly over the long term.
- A flexible reward mechanism that can adapt to changing market conditions and user behaviors, supporting both token value and platform engagement.

Mechanisms to Prevent Token Over-Issuance

To protect against the risk of token over-issuance and inflation, TextRP incorporates several mechanisms to ensure that the supply of \$TXT remains scarce and valuable:

1. **Tiered Reward Reductions:** By adjusting the distribution percentage based on the user base size, TextRP ensures that the total amount of \$TXT tokens distributed decreases over time, reducing the rate of new token issuance as the platform grows.
2. **Proportional Rewards:** Since rewards are distributed based on relative activity within the platform, this ensures that only active users earn tokens, preventing the accumulation of tokens by inactive or low-engagement accounts.
3. **Adjustable Weights and Caps:** The platform may introduce caps or limits on certain activities to prevent the gaming of rewards through excessive or artificial engagement. This ensures that rewards remain fair and consistent across all users.

\$TXT Revenue

On-ledger \$TXT received for the purchase of mCredits is divided in the following manner:

- 50% burned, forever removed from circulation.
- 25% to company operations.
- 10% swapped for XRP to Launch Pack NFT Reward Pool.
- 10% allocated to a charity fund, distributed annually to a charity selected via token Governance.
- 5% company operations.

Sustainable Tokenomics

TextRP's approach to long-term sustainability combines a flexible, tiered reward distribution model with a proportional reward system based on user engagement. By tying token issuance to user growth milestones and reducing the reward distribution rate over time, TextRP ensures that the \$TXT token remains scarce, valuable, and incentivizes meaningful engagement over the platform's lifetime.

With these mechanisms in place, TextRP's tokenomics model is designed to provide lasting value to users while supporting the platform's growth and long-term success.

Section 6: Token Utility and Ecosystem

Uses of the \$TXT Token

The \$TXT token is central to the TextRP platform, providing a wide range of utilities that incentivize user engagement and drive the platform's ecosystem. Through purchasing mCredits, accessing premium features, participating in liquidity pools, and more, the \$TXT token empowers users to interact with the platform in multiple ways.

1. Purchasing Platform Services

mCredits are essential interaction units within the TextRP platform. Users consume mCredits to send messages, interact with widgets, and perform various activities across the platform. Users can purchase mCredits using \$XRP, fiat currency, or \$TXT tokens. However, to promote the use of \$TXT within the ecosystem, TextRP offers a significant incentive for users who purchase mCredits using \$TXT tokens.

- When users buy mCredits with \$TXT tokens, they receive more mCredits than when purchasing with XRP or fiat, providing them with greater value for their \$TXT holdings.

This incentive encourages users to hold and use \$TXT as the primary means of engaging with the platform, maximizing their interaction capacity and further reinforcing \$TXT's role as the most efficient and valuable method to participate on TextRP.

By purchasing mCredits with \$TXT, users enhance their ability to send messages and engage across the platform at higher efficiency, making \$TXT the preferred currency for interaction.

2. Feature Pack NFTs

Feature Pack NFTs unlock exclusive functionalities and customizations within the TextRP platform. These NFTs grant users access to premium features, such as advanced communication tools or personalized chat experiences.

- Discounted Purchases Using \$TXT:
 - Users who purchase Feature Pack NFTs using \$TXT tokens benefit from discounted prices, allowing them to access premium features at a lower cost compared to other payment methods.
 - This further incentivizes the use of \$TXT within the platform, driving demand for the token while rewarding users with enhanced features and customizations.

Feature Pack NFTs also allow users to personalize their experience on TextRP, giving them exclusive tools and styles to enhance their communication and engagement.

3. Merchandise Purchases

TextRP offers both digital and physical merchandise that users can purchase using \$TXT tokens. This includes items tied to the TextRP brand, partner platforms, and ecosystem-related products.

- Bridging the Digital and Physical Realms:
 - \$TXT tokens can be spent on TextRP-branded merchandise, creating a tangible connection between the digital world of messaging and the physical realm of branded items.
 - This extends the utility of \$TXT beyond the platform, allowing users to engage with TextRP's community through physical goods.

By offering merchandise through \$TXT, TextRP expands the token's value proposition and provides users with additional ways to spend their tokens outside of messaging and platform activities.

4. Liquidity Pools

TextRP will integrate \$TXT tokens into Automated Market Maker (AMM) liquidity pools, providing users with the opportunity to contribute liquidity and earn rewards through decentralized financial mechanisms.

- Earning Through Liquidity Provision:
 - Users can stake their \$TXT tokens in liquidity pools, helping ensure the token's liquidity in decentralized exchanges while earning rewards for their contributions.
 - This gives \$TXT holders the ability to earn passive income by participating in AMM-based liquidity pools, providing them with additional incentives to hold and utilize \$TXT beyond basic platform interactions.

By integrating \$TXT into liquidity pools, the token is connected to the broader DeFi ecosystem, offering holders new opportunities to engage in decentralized finance and earn rewards.

5. Payments

\$TXT tokens can also be used for settling payments, gifting, and tipping with TextRP's in-chat payments feature, encouraging social engagement and the creation of valuable content. This feature enables users to show appreciation for meaningful contributions from others, fostering a vibrant and supportive community.

- Encouraging Content Creation:
 - Users can tip content creators, community leaders, or friends in the form of \$TXT tokens, rewarding them for their engagement and contributions.
 - Gifting and tipping are essential to building a positive culture within the platform, allowing users to show support for content they find valuable.

By enabling payments via \$TXT tokens, TextRP promotes a peer-to-peer economy where users are rewarded for adding value to the community, further driving token circulation and engagement.

6. NFT Trading

TextRP features a P2P NFT trading widget that allows for the trading and transfer of NFTs between chat participants.

- There is no NFT trading fee when using this utility.

By offering P2P NFT trading, TextRP expands the platform's value proposition and provides users with additional ways to spend their tokens.

7. Governance

A key feature of \$TXT governance is the ability for token holders to vote on important decisions within the TextRP ecosystem, particularly when it comes to selecting Automated Market Maker (AMM) pairs for liquidity pools. This governance mechanism gives \$TXT holders a direct role in shaping the platform's token liquidity and trading opportunities.

Voting on AMM Pairs:

- \$TXT token holders can vote on which trading pairs should be introduced or prioritized within liquidity pools. Examples of potential pairs include \$TXT/EURO, \$TXT/\$RLUSD, or other strategic pairings with tokens from partner platforms.
- This governance system ensures that the community can influence liquidity strategies and determine the best token pairings to support the platform's growth and trading efficiency.

Encouraging Long-Term Holding:

- Governance participation requires holding \$TXT tokens, giving token holders an incentive to maintain their positions long-term. This enhances \$TXT demand as users seek to participate in governance decisions that can directly impact their earnings and platform engagement.

Through this decentralized governance model, TextRP ensures that its liquidity pool decisions and token strategies reflect the collective interests of the community, providing \$TXT holders with meaningful influence over the platform's future.

Community Participation and Incentives

User-Created Content:

Users who create valuable content within the platform (e.g., developing tutorials, organizing events, providing technical support) may be rewarded with \$TXT tokens.

Content creators may receive recognition through community tipping or be rewarded through platform-sponsored initiatives that incentivize contributions that enhance the user experience.

Collaborative Development:

As TextRP expands, the platform will explore open-source collaboration, inviting developers from the community to contribute to the codebase and propose new technical solutions.

Hackathons and developer challenges will be held to incentivize innovative solutions, with rewards granted to developers who create impactful tools, features, or optimizations for the TextRP ecosystem.

Community Events and Competitions:

TextRP will regularly host community-driven events, such as contests, challenges, or collaborative initiatives.

Participants in these events can earn mCredits, \$TXT tokens, NFTs, or exclusive platform perks for their engagement and achievements.

Ambassador Programs:

TextRP plans to develop an Ambassador Program that allows highly engaged and influential community members to act as brand ambassadors, representing the platform in various channels and promoting it to new users.

Ambassadors can earn rewards for their efforts in growing the platform and creating value for the community. This can include exclusive access to new features, NFTs, or higher rewards in the form of \$TXT tokens.

User Feedback and Collaboration

The success of TextRP relies on continuous feedback from the community. Users are encouraged to provide suggestions, report bugs, and offer insights that can help improve the platform's functionality and overall experience.

Section 7: Accomplishments & Traction

Building Momentum in the XRPL Ecosystem

TextRP has rapidly established itself as a pioneering unified messaging platform on the XRP Ledger (XRPL), bridging Web2 and Web3 communications with wallet-based identity, end-to-end encryption, and seamless token utility. Since its beta launch, the platform has achieved key milestones in product development, community engagement, partnerships, and ecosystem recognition, demonstrating strong traction and positioning TextRP as ***the chat layer for the XRPL***.

These accomplishments reflect dedicated execution on our vision: delivering secure, private, and incentivized messaging that enhances XRPL utility while rewarding users through \$TXT tokenomics, Feature Pack NFTs, and real-world integrations.

Key Milestones

- **Awards & Recognition:**
 - Won 2nd Place in the 2023 Ripple Summer Hackathon (Tokenization track.)
 - Won 1st place in the prestigious Shark Tank competition at XRPL Las Vegas, hosted by Digital Perspectives and EasyA App, highlighting TextRP's innovative approach among top XRPL builders.
- **Product Launches & Technical Advancements:**
 - Major updates to the XRP Wallet Messenger browser extension ([Chrome Web Store](#)).
 - ChatPay: send XRP and other trustline tokens via chat.
 - P2P NFT trading: send and trade NFTs with no trading fees.
 - Native room token-gating: grants access to rooms only to holders of select tokens.
- **Partnerships & Collaborations:**
 - Strategic integration with OpulenceX for TXT/XRP liquidity pool yield farming and NFT staking rewards.
 - Public appearances/interviews of founder and CTO in interview shows, conventions, and XRPL-focused spaces, boosting visibility and user adoption.
- **Community Growth & Engagement:**
 - >5000 wallets onboarded to the TextRP ecosystem.
 - 20+ communities built their dedicated spaces on TextRP.

Section 7: Roadmap & Future Outlook

A Sustainable, Engaging Ecosystem

TextRP is built around a vision of creating a decentralized communication platform that not only serves as a secure and efficient messaging tool but also incentivizes user participation through a robust token economy powered by the \$TXT token. With its tiered reward system, dynamic user engagement model, and the integration of features such as NFTs, liquidity pools, and governance, TextRP fosters a thriving ecosystem where users are rewarded for their contributions and can shape the future of the platform.

By incorporating mechanisms to ensure long-term sustainability, including the tiered reward reductions and proportional activity-based rewards, TextRP is positioned to maintain token scarcity, incentivize early adopters, and preserve the value of \$TXT as the platform grows. The token's utility across various features, such as purchasing mCredits, accessing premium services through Feature Pack NFTs, and gifting/tipping, ensures that \$TXT remains central to the TextRP experience, driving engagement and creating lasting value.

2026 Roadmap

Expanding the TextRP Ecosystem

As the platform continues to evolve, TextRP will focus on expanding the utility of the \$TXT token and integrating with emerging technologies in the blockchain space. The long-term vision for the platform includes deeper integrations with Decentralized Finance (DeFi), enhanced NFT offerings, and a more expansive governance model that empowers users to have an even greater say in the direction of the ecosystem.

1. Expanded Governance:

- In the future, TextRP's governance model will likely evolve, giving \$TXT holders the ability to make decisions on a wider range of platform features and policies. This could include more involvement in determining the direction of tokenomics, selecting strategic partnerships, or deciding on additional feature rollouts.
- The governance participation for determining AMM pairs will be a critical first step toward empowering users, with future expansions giving the community more control over the platform's evolution.

2. Cross-Platform Utility and Interoperability:

- TextRP will explore opportunities for cross-platform integration, allowing \$TXT to be used across other ecosystems and applications. This could involve partnerships with other decentralized platforms, allowing users to spend or earn \$TXT tokens in a broader range of use cases.
- Interoperability with other blockchain ecosystems could enable TextRP to attract a broader user base and integrate with emerging DeFi, NFT, and blockchain-based messaging solutions.

3. Enhanced NFT Ecosystem:

- As NFTs continue to grow in popularity, TextRP will build out its NFT marketplace, offering more exclusive and customizable digital assets. The marketplace could expand to offer NFTs that unlock new functionalities, grant special privileges within the platform, or even serve as membership tokens for premium services.

4. DeFi Integration:

- Future plans include deeper integration with DeFi protocols, giving \$TXT holders more ways to use their tokens for yield farming, staking, and liquidity provision. These features will help create a more dynamic financial ecosystem within TextRP, giving users the ability to grow their \$TXT holdings while contributing to the platform's liquidity and overall health.

Vision for a Decentralized Communication Hub

TextRP aims to position itself as a leader in decentralized communication by offering a secure, privacy-focused, and reward-driven messaging platform. With its innovative tokenomics and expanding use cases for the \$TXT token, TextRP has the potential to redefine how users interact in a digital, decentralized world. By offering incentives for engagement, creating opportunities for community governance, and maintaining a sustainable token economy, TextRP is poised for long-term success as both a communication tool and a blockchain ecosystem.

Key Takeaways

- **Sustainability:** TextRP's tiered reward system ensures the long-term scarcity and value of \$TXT, protecting against inflation and oversupply while providing fair rewards to both early and long-term users.
- **Utility:** \$TXT offers significant utility within the platform, from purchasing mCredits to trading NFTs and participating in liquidity pools, ensuring that the token remains central to the platform's economy.
- **Community-Centric:** TextRP empowers its community through governance participation, allowing \$TXT holders to vote on key decisions such as AMM pair selection and platform features, fostering a decentralized decision-making process.
- **Future Growth:** TextRP is committed to expanding its ecosystem by integrating with DeFi, NFTs, and other decentralized platforms, ensuring continued innovation and relevance in the evolving blockchain landscape.

Section 8: Legal Disclosure & Disclaimers

Informational Purposes Only

This whitepaper is provided solely for informational purposes and does not constitute an offer to sell, a solicitation to buy, or a recommendation for investment. The information contained herein is subject to change without notice and does not bind TextRP or its affiliated entities in any way. Prospective participants are advised to seek independent professional advice before making any financial, legal, or investment decisions.

Utility Token Classification

The \$TXT token is designed as a utility token intended for use within the TextRP platform. It is not a security, financial instrument, or investment product, and does not confer ownership, equity, or rights to profits or decision-making in TextRP or its affiliated entities. Any perceived value of \$TXT tokens arises solely from their use within the TextRP ecosystem.

No Token Offering or Investment Solicitation

This whitepaper does not represent a public offering or solicitation to purchase \$TXT tokens. Any future distribution or sale of tokens will comply with applicable laws and regulations. Users should not purchase or hold \$TXT tokens with the expectation of profit or gains derived from the efforts of others.

Future Token Use and Sale

The \$TXT token's primary purpose is to facilitate engagement and activities within the TextRP platform. The availability of \$TXT tokens for purchase, trade, or exchange on external markets is not guaranteed. Any future token sale or exchange listings will adhere to local regulations and may require participants to complete identity verification through KYC (Know Your Customer) and AML (Anti-Money Laundering) processes.

Market Volatility

The cryptocurrency market is highly volatile. The value of \$TXT tokens may fluctuate due to changes in market conditions, user adoption, or other unforeseen factors. TextRP does not guarantee the value or stability of \$TXT tokens and assumes no liability for losses resulting from market volatility.

Regulatory Changes

The regulatory environment for blockchain and cryptocurrency is constantly evolving. Laws and regulations may change, potentially impacting the operation of TextRP, the utility of \$TXT tokens, or the ability to access the platform in certain jurisdictions.

Technical Risks

TextRP relies on blockchain technology, which is subject to technical risks, including vulnerabilities, hacking, and unforeseen operational challenges. TextRP makes no guarantees regarding the platform's continuous availability, security, or performance.

User Responsibility

Participants are solely responsible for safeguarding their tokens, private keys, and associated accounts. TextRP assumes no liability for losses resulting from user error, third-party actions, or platform downtime.

Jurisdictional Restrictions

Participation in the TextRP platform and use of \$TXT tokens may be restricted in jurisdictions where blockchain or cryptocurrency activities are prohibited. Residents of such jurisdictions are not permitted to engage with the TextRP ecosystem. Users are responsible for determining and complying with the laws of their respective jurisdictions.

Tax Obligations

Participants are responsible for determining and fulfilling any tax obligations arising from the acquisition, ownership, or use of \$TXT tokens. TextRP does not provide tax advice and assumes no liability for any tax-related consequences of participation.

Forward-Looking Statements

This whitepaper may contain forward-looking statements regarding TextRP's future plans, objectives, and projections. These statements are not guarantees of performance and are subject to risks and uncertainties that may cause actual outcomes to differ materially. TextRP reserves the right to modify or discontinue any part of the platform, including token functionality, without prior notice.

No Guarantees or Liability

TextRP and its affiliated entities do not guarantee the success, performance, or value of \$TXT tokens or the TextRP platform. Under no circumstances shall TextRP be held liable for any losses, damages, or claims arising out of participation in the platform, including but not limited to:

- Loss of funds or tokens.
- Platform outages or failures.
- Regulatory changes affecting token use or availability.

Changes to the Whitepaper

TextRP reserves the right to revise, update, or amend this whitepaper at its discretion to reflect changes in business strategy, market conditions, or regulatory requirements. Participants are encouraged to review the latest version of the whitepaper for up-to-date information.

Company

The TextRP platform is designed and created by Xurge Digital Lab LLC, a US corporation.
